MEMORANDUM

TO: Milk Distributors

FROM: Wayne R. Carlson, Dairy Director

DATE March 12, 2010

RE: Storage Temperature

As my earlier memo stated we adopted new regulations regarding the transportation of processed and manufactured milk products which required temperature of dairy products to be 41 degrees instead of 45 degrees. This memo is to inform you that our department **will not** be enforcing these regulations (41 degrees) because of a possible conflict with interstate transportation regulations and the PMO. Please inform all of your drivers that they must maintain a cooler temperature at a maximum of 45 degrees in their trucks.

If you have any questions, I can be reached at (701)-328-4761.
