

The background is a solid red color. Scattered across it are several stylized, dark red icons of food items: a whole tomato in the top left, a leaf in the top center, a whole tomato in the top right, a slice of tomato in the center, a leaf in the bottom left, a whole tomato in the bottom center, and a bunch of asparagus in the bottom right.

Food Bytes!

BIOFILTRO

worm powered wastewater solutions

Our patented Biodynamic Aerobic (BIDA[®]) System transforms liquid manure into reusable assets. As our four-hour method completes the nitrification denitrification process, we improve water, soil, and air.

The Dirt

Average worm lifespan is 6-8 years
They prefer pH 5.0 - 9.0

Casting removal
Every 18 months
Zonal for no operational downtime

Can handle overloads
Snap on additional modules

Dairies operating in WA, CA, New
Zealand, and Chile

Worms, Meet Regenerative Agriculture

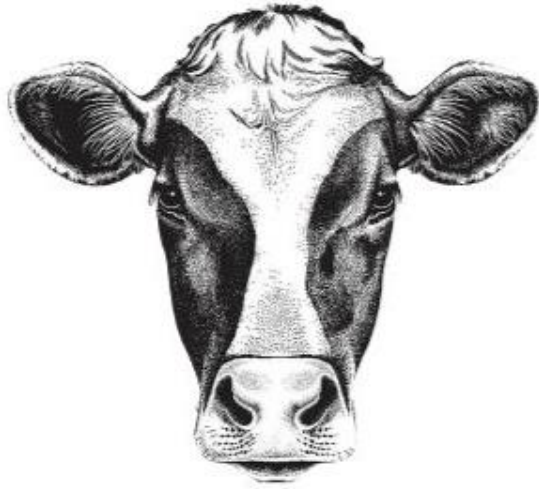

Reduce ammonia and nitrogen in waste streams to achieve compliance

Generate castings which are profitable and beneficial byproducts

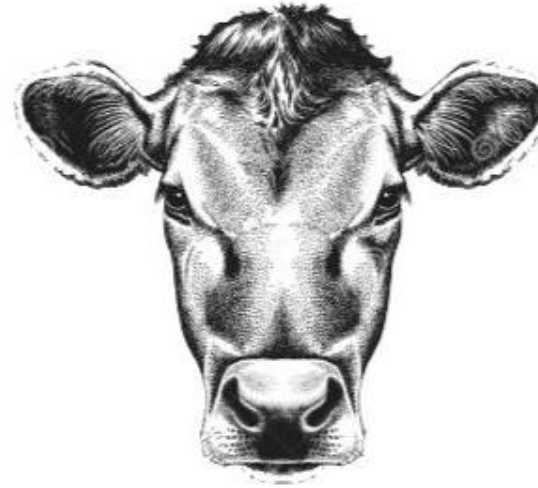

Complete nitrification denitrification process within 4 hours

Holstein

77.5 Square Feet/Cow

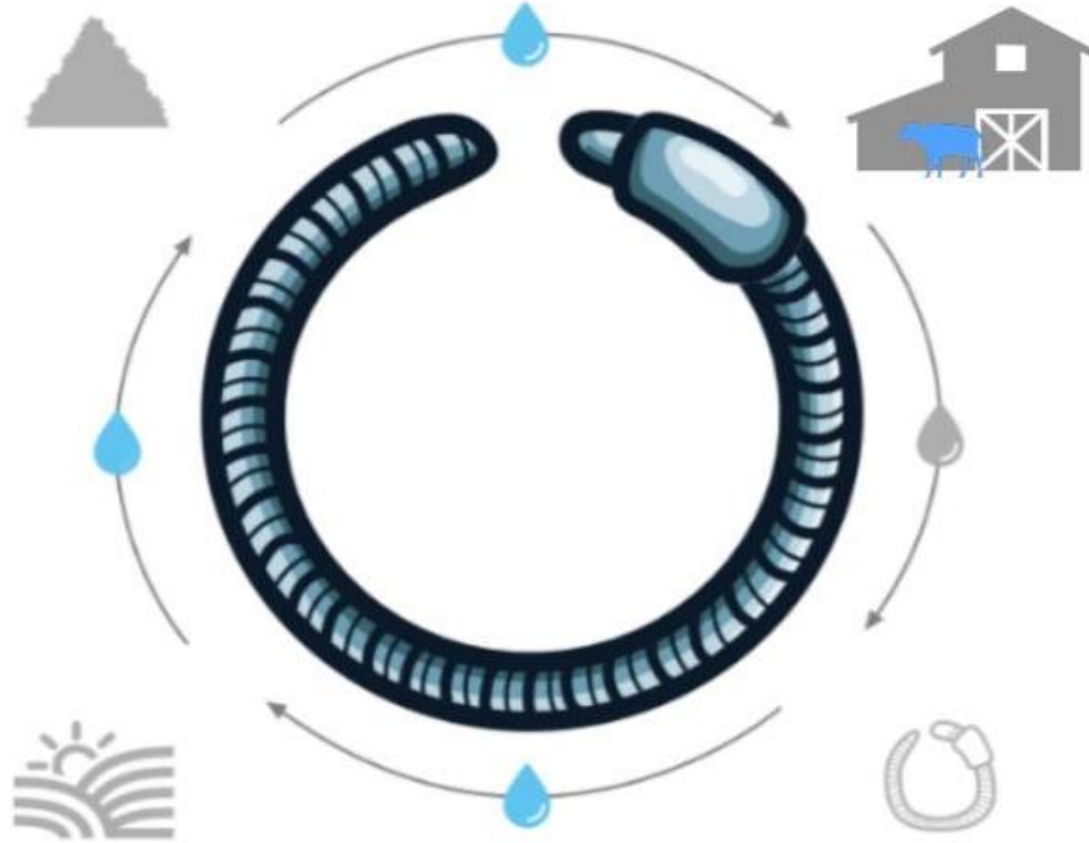

8.2 tCO₂/yr GHG Credit /Cow

Jersey

55.1 Square Feet Per Cow

5.6 tCO₂/yr GHG Credit Per Cow
